Proton

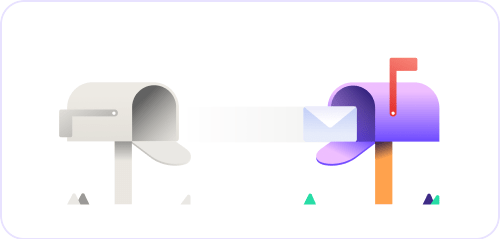
Welcome to the Proton community

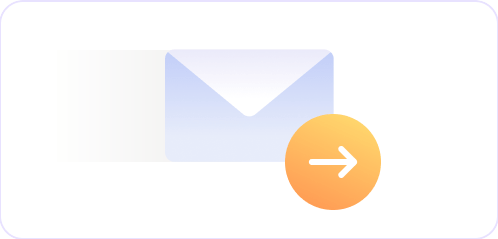
Since Proton Mail was created by scientists who met at CERN in 2014, we have grown to become the world's largest secure email service, safeguarding the communications of tens of millions of people in over 180 countries.

You now have an easy-to-use inbox that **protects your emails with strong encryption**. Not even we can read your emails.

Let us import your emails for you

Our **Proton Easy Switch** tool lets you quickly move your emails and contacts from your old email provider to your new secure Proton Mail inbox.





Simply sign in to your old account using Proton Easy Switch and we'll handle the rest. Import your emails and contacts with Proton Easy Switch.

Never miss emails sent to your old address. Our migration guides show you how to forward emails to Proton Mail from Gmail, Yahoo and Outlook.

Use Proton Easy Switch

Upgrade to support our mission and get more done

With a **Proton Mail Plus** plan:

- Get 15 GB to store more emails, attachments, and files
- Personalize your inbox with all the folders, labels, and filters that you need
- Have up to 10 email addresses and use your own email domain, e.g. you@yourname.com
- Auto-responder, contact groups, IMAP/SMTP support, and much more

Be part of the movement

Proton has always been guided by its community, all the way from our beginning as a crowdfunded project. Your support, input, and participation make Proton Mail what it is today.

Whether you want to advocate for privacy and freedom around the world, explore privacy issues directly with the Proton Mail team, or suggest new products or features, we invite you to add your voice.

Together, we are leading the shift to privacy.

We're here to help

If you experience a problem with Proton Mail, we have an extensive selection of how-to guides on our support site.

Thanks for fighting for a better internet where privacy is the default.

Stay secure,
The Proton Team
